Server Setup

Enable SOAP API on the server if is not activated

Project setup

Mantis Bug Tracker

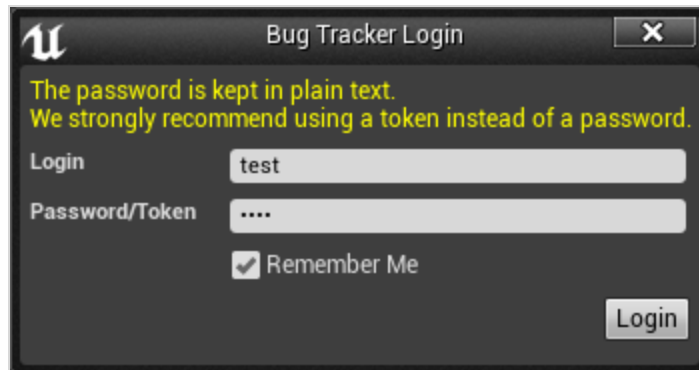

“MantisBT makes collaboration with team members & clients easy, fast, and professional

MantisBT is an open-source issue tracker that provides a delicate balance between simplicity and power. Users are able to get started in minutes and start managing their projects while collaborating with their teammates and clients effectively. Once you start using it, you will never go back!”

MantisHub

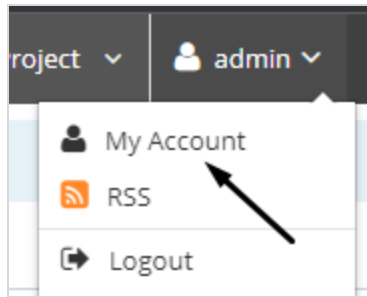

“Track your issues with our simple, intuitive interface. Split your issues into categories and move them through your issues life-cycle. Search them, auto-assign them to your developers, attach files, tag them, ping your teammates and customize your system. All this and more with the well-known Mantis brand”

Authentication

A screenshot of a 'Bug Tracker Login' dialog box. The dialog has a dark background with a light-colored title bar. Inside, there is a yellow warning message: 'The password is kept in plain text. We strongly recommend using a token instead of a password.' Below this, there are two input fields: 'Login' with the text 'test' and 'Password/Token' with four dots. There is a checked checkbox labeled 'Remember Me' and a 'Login' button at the bottom right.

Using token instead of password is always better chose. To generate token follow these steps:

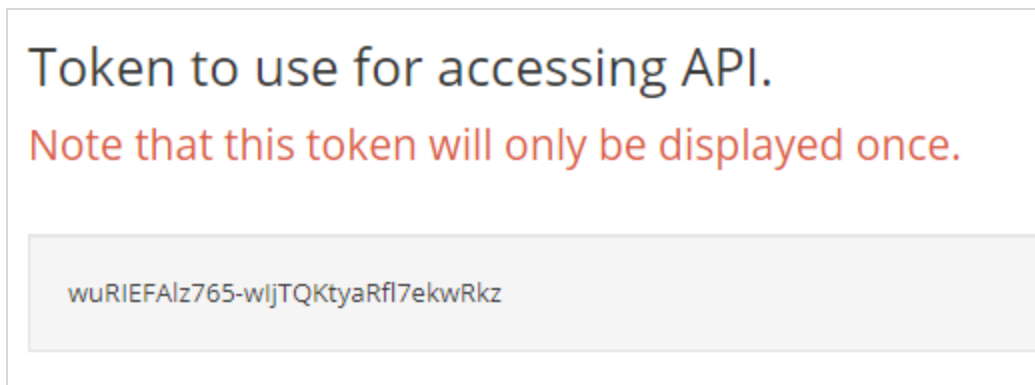

1. Open My Profil page

1. Navigate to API token section and select Create API Token

A screenshot of a web application interface. At the top, there are tabs: 'My Account', 'Preferences', 'Manage Columns', 'Profiles', and 'API Tokens'. The 'API Tokens' tab is selected. Below the tabs, there is a blue header with a plus icon and the text '+ Create API Token'. Under this header, there is a form with a label 'Token Name' and an empty text input field. Below the input field is a button labeled 'Create API Token'.

- 3 Use a generated token to login

Server Setup

Enable SOAP API on the server if is not activated

https://mantisbt.org/docs/master-1.3.x/en-US/Admin_Guide/html/admin.config.soap.html

Project setup

LadyBug Tracker required to add two custom fields Camera and Level. Information about how to add the custom fields is available [here](#)
