YouTrack

“A project management tool that can be adapted to your processes to help you deliver great products. Track projects and tasks, use agile boards, plan sprints and releases, keep a knowledge base, work with reports and dashboards, and create workflows that follow your business processes. Never force your process to fit the limits of a tool again. Unlike other project management tools, YouTrack can be customized to your needs!”

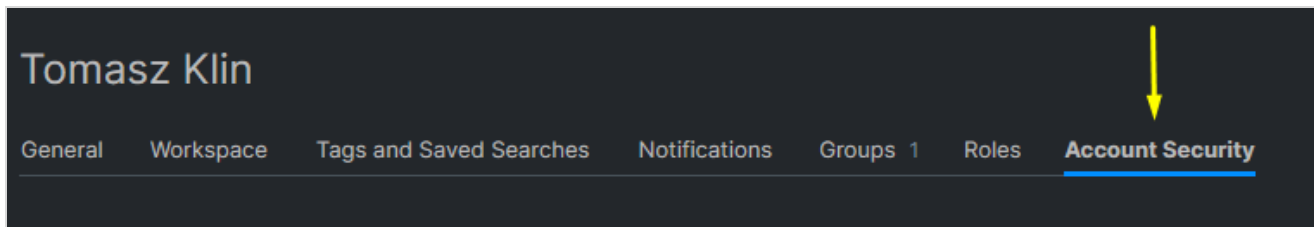

Authentication

To log in from the plugin you need to generate a token first. Follow these steps to do this

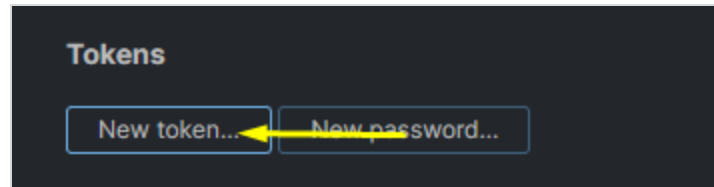

1. Open user profile

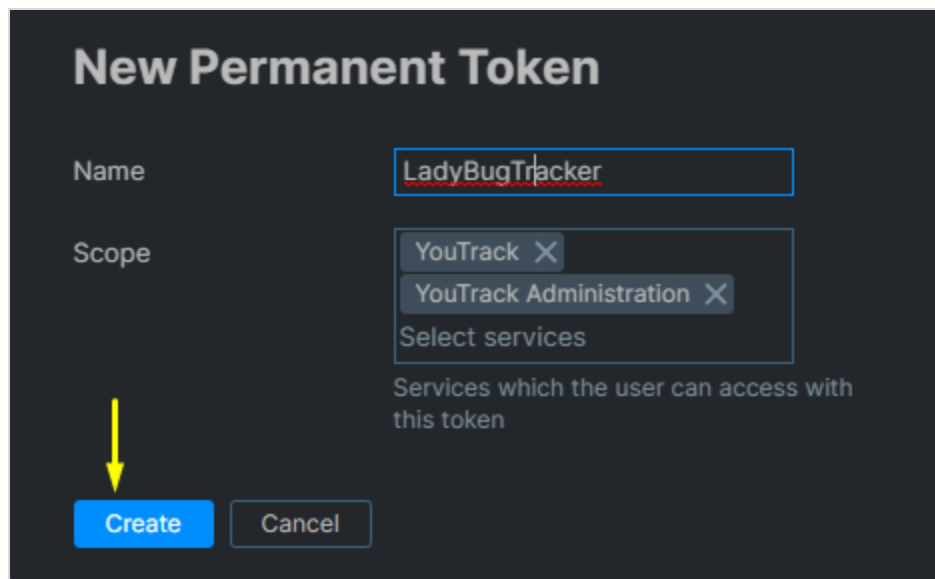

1. Navigate to the “Account Security” tab

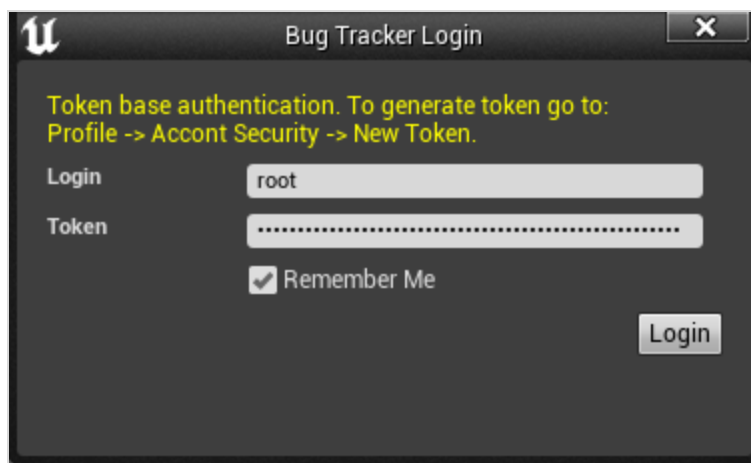

1. Click “New Token”

1. Enter any name, and click “Create”

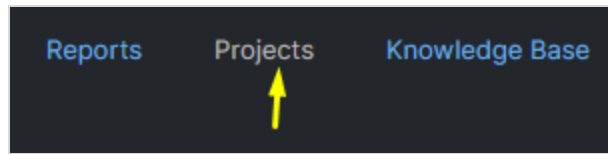

1. In the plugin use your username and token to login

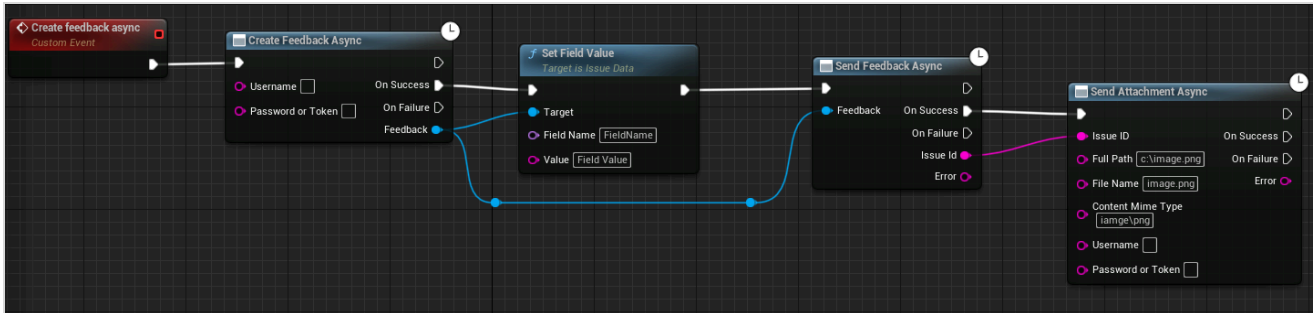

Project setup

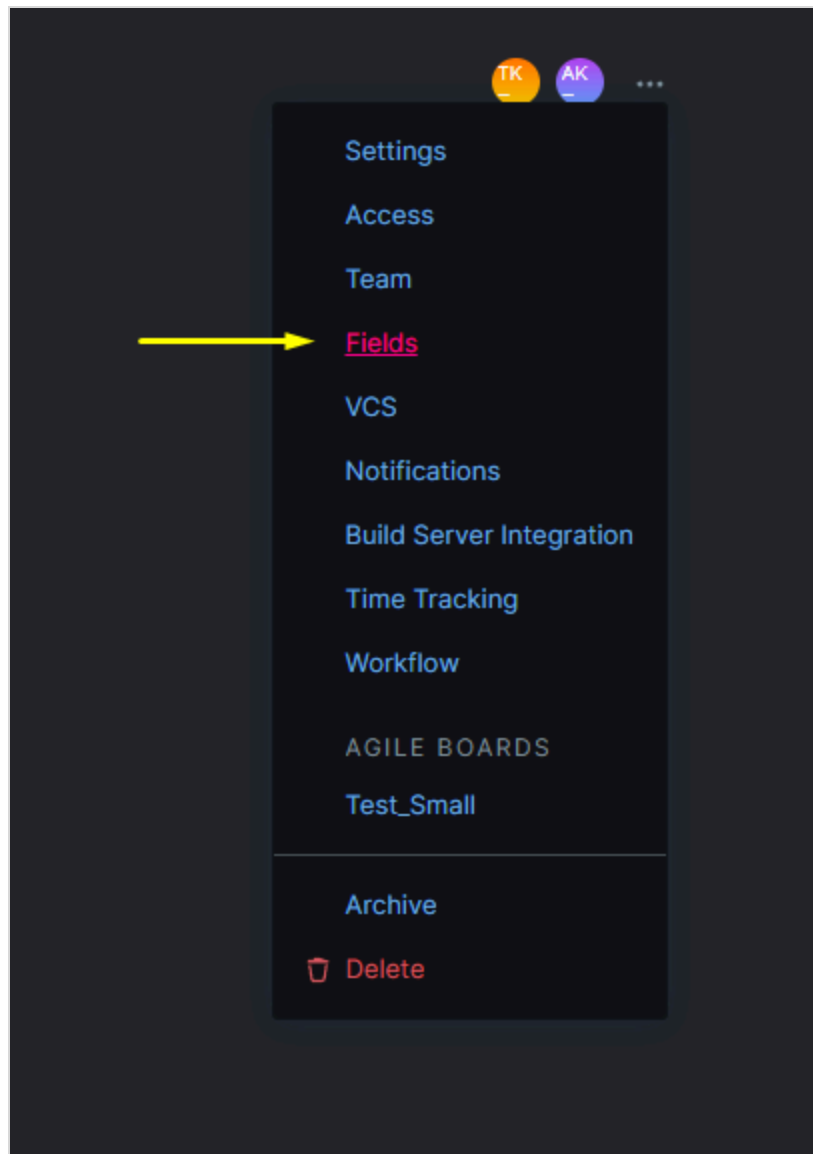

1. Open the project tab

1. Create a new project or select an existing one

1. Go to the “Fields” section

1. Add Camera and Level fields

Create new

Use existing

Field Name

Camera

Field name shouldn't contain any of following characters: <, /, >, :

Type

string

Aliases

Comma-separated list of aliases to use in search queries and commands

☒ Can be empty

Empty value

Create new

Use existing

Field Name

Level

Field name shouldn't contain any of following characters: <, /, >, :

Type

string

Aliases

Comma-separated list of aliases to use in search queries and commands

☒ Can be empty

Empty value

Downloading only part of the project

By default every issue in the project is downloaded. **Project Settings > Plugins > LadyBug Tracker > YouTrack Settings > Issue Query Filter** narrows that: whatever you write there is added to the `project:{ProjectName}` query the plugin sends, using YouTrack's own search syntax.

A few that come up often:

Filter	What comes down
#Unresolved	open issues only
Type: Bug	bugs, leaving out features and tasks
Assignee: me	issues assigned to you
created: {This week}	issues raised this week

Leave the field empty to download everything. The filter applies when issues are downloaded, so change it and download again to see the effect.

Subtasks

Where the project has a subtask link type, an issue carries a **Subtask of** field, listing the issues that can be its parent. Pick one to file the bug under it, or leave the field at **No parent** to keep it standalone. The field can be changed later, which moves the issue under a different parent.

The field is only shown when the YouTrack project actually defines a subtask link type; a project without one has nothing to file under, and the field stays out of the way.
